Chapter 1 Introduction

1.1 The Need for Risk Management	1
1.2 The Need for Continued Research	5
1.3 Definition of ‘Risk’ and ‘Risk Management’	7
1.3.1 Risk	7
1.3.2 Risk Management	8
1.4 Programmatic History of Risk Management	9
1.5 Outline of Following Chapters	14

Chapter 2 Literature Survey

2.1 The Five Steps of Risk Management	17
2.2 Risk Analysis: Identification	20
2.2.1 Individual Consultation	23
2.2.2 Group Discussion	24
2.2.3 HAZOP	25
2.3 Risk Analysis Techniques: Estimation Stage	27
2.3.1 Qualitative analysis	28

2.3.1.1 Fuzzy set analysis	30
2.3.1.2 Interviewing and Brain-storming	31
2.3.1.3 Personal and Corporate experience	32
2.3.1.4 Engineering judgement	32
2.3.2 Quantitative analysis	33
2.3.2.1 Expected monetary value (EMV)	38
2.3.2.2 Expected net present value (ENPV)	39
2.3.2.3 Decision analysis	41
2.3.2.3.a Algorithms	42
2.3.2.3.b Decision matrix	43
2.3.2.3.c Decision trees	44
2.3.2.3.d Bayesian analysis	46
2.3.2.3.e Stochastic decision tree	48
2.3.2.4 Sensitivity analysis	49
2.3.2.4.a Break-even analysis	52
2.3.2.4.b Spiderplots	53
2.3.2.4.c Scenario analysis	55
2.3.2.5 EMV using Delphi peer group	59
2.3.2.6 Risk adjusted discount rate (RADR)	60
2.3.2.7 De Minimis theory	61
2.3.2.8 Simulation	63
2.3.2.8.a Monte Carlo sampling	69
2.3.2.8.b Latin Hypercube technique	72
2.3.2.9 Portfolio theory	73
2.3.3 Stochastic dominance	74
2.3.4 Summary	75
2.4 Risk Evaluation Stage	76
2.5 Risk Response Strategy	78
2.5.1 Risk avoidance	78
2.5.2 Risk transfer	79
2.5.3 Risk retention	82

2.5.4 Risk reduction	83
2.5.5 Other methods of handling risks	84
2.5.5.1 Risk spreading or diversification	84
2.5.5.2 Reducing risk liability by use of the employment contract	84
2.6 Risk Monitoring Stage	85

Chapter 3 Questionnaire on Risk Management

3.1 Introduction: The Need for a Risk Management Questionnaire	87
3.2 Design of the Questionnaire	88
3.3 Methodology of the Questionnaire	91
3.4 Format of the Questionnaire	92
3.5 Answering Techniques	93
3.6 Non-Response Replies	95
3.7 Summary of the Replies	97

Chapter 4 Analysis of the RMQ

4.1 Introduction	99
4.2 Analysis of Section 1 of the Questionnaire:	100
4.2.1 Analysis of primary responsibility of the respondents	100
4.2.2 Analysis of age and experience against job responsibility	102
4.3 Analysis of section 2 of the Questionnaire	107
4.3.1 Analysing and summarising questions 4 to 19 inclusive	107
4.3.1.1 Analysis of certain aspects of the respondents' company	108
4.3.1.2 Analysing whether the physical conditions lead to accidents at work	109
4.3.1.3 Analysing some general questions on risk and risk management	110
4.3.1.4 Analysing some company approaches and methods	113
4.3.1.5 Analysing some personal characteristics of risk analysts	116
4.3.1.6 Analysing some general risk scenarios	119
4.3.1.7 Analysing some traits of different bodies of people	120
4.3.2 Company policies when responding to risk	122

4.4 Analysis of Section 3 of the Questionnaire	125
4.4.1 Analysing the methods of risk transfer	126
4.4.2 Analysing the methods used for financially transferring risks	127
4.4.3 Analysing the financial limits of insurance	129
4.4.4 Analysing the additional provisions the insurers provide and the value of those provisions	130
4.4.5 Analysing the proportion of replies who have ‘shared’ a risk, and the methods used to so do	132
4.4.6 Analysing the popularity and rationalism for using captive insurance companies	134
4.5 Analysis of Section 4 of the Questionnaire	139
4.5.1 Analysing the type of retained risks	139
4.5.2 Analysing some of the reasons for retaining risks	140
4.5.3 Analysing the frequency of the methods used to finance retained risks	142
4.6 Analysis of Section 5 of the Questionnaire	143
4.6.1 Analysing company’s competency at specific practices used for reducing risks	144
4.6.2 Analysing the methods successfully used to reduce accidents, i.e. risk	146
4.7 Analysis of Section 6 of the Questionnaire	148
4.7.1 Analysing the cost, as a fraction of the total project cost, of Risk Analysis compared to the Management of the Project.	149
4.7.2 Analysing financial losses through unforeseen risks	151
4.7.3 Analysing the prevalent techniques used for risk analysis	154
4.7.4 Analysing the company’s and respondent’s attitudes towards accidents and ‘acceptable risk’	168
4.8 Analysis of Section 7 of the Questionnaire	174
4.8.1 Analysing at which stage risk analysis is used during a project	174
4.8.2 Analysing the importance of six types of risk	176
4.8.3 Analysing the characteristics of some encountered risks	180
4.8.4 Identifying especially unusual or well analysed risks	181

Chapter 5 Risk Analysis Techniques used by AHL in comparison
to other Oil Companies

5.1 Risk Analysis Techniques used by AHL	183
5.1.1 Introduction	183
5.1.2 The type of techniques used. (Qualitative, Quantitative, or a combination of the two)	184
5.1.3 An analysis of the risk analysis techniques used by the oil industry, AHL and company Y	185
5.2 Concluding remarks	193

Chapter 6 Case Study: **AH001** Installation QRA

6.1 Introduction	195
6.2 Origination of the ‘Safety Case’	196
6.3 Brief overview of the AH001 installation	199
6.4 Risk Analysis Procedure as Documented in the Safety Case	202
6.4.1 Identification and Description of Major Hazards	203
6.4.2 Risk Ranking of Hazards	205
6.4.3 Major Hazards Quantitative Risk Analysis	208
6.4.4 Quantitative risk expressions	210
6.4.4.1 Probable loss of life (PLL)	210
6.4.4.2 Individual risk (IR)	210
6.4.4.3 Temporary Refuge Impairment (TRI) frequency	212
6.4.5 Method used for QRA by AHL	213
6.4.6 Risk Tolerability criteria	214
6.4.7 ALARP	217
6.4.8 Temporary Refuge Impairment	219
6.4.9 Demonstrating ALARP	219
6.4.10 Risk Management	219
6.5 Detailed QRA Methodology	221
6.6 Best estimate and uncertainty analysis	230

6.6.1	Initiating Event	235
6.6.1.1	Best estimate analysis	235
6.6.1.2	Uncertainty analysis	236
6.6.2	Ignition Probability and Delayed Ignition	237
6.6.2.1	Best estimate analysis	238
6.6.2.2	Uncertainty analysis	241
6.6.3	Delayed Ignition Probabilities	243
6.6.3.1	Best estimate analysis	244
6.6.3.2	Uncertainty analysis	244
6.6.4	Fire and Gas Detection Failure Probabilities	245
6.6.4.1	Best estimate analysis	247
6.6.4.2	Uncertainty analysis	248
6.6.5	Isolation and Blowdown Failure Probabilities	250
6.6.5.1	Best estimate analysis	251
6.6.5.2	Uncertainty analysis	252
6.6.6	Deluge Failure Probability	252
6.6.6.1	Best estimate analysis	255
6.6.6.2	Uncertainty analysis	255
6.6.7	Escalation Probabilities	257
6.6.7.1	Best estimate analysis	258
6.6.7.2	Uncertainty analysis	259
6.6.8	Immediate Fatalities	260
6.6.8.1	Best estimate analysis	260
6.6.8.2	Uncertainty analysis	261
6.6.9	EER Fatalities	262
6.6.9.1	Best estimate analysis	264
6.6.9.2	Uncertainty analysis	264

Chapter 7 Improvements to AHL Risk Analysis Process

7.1	Introduction	266
7.2	The Problems that Require Attention	267

7.3	The Proposai for Modifying the Event Tree Analysis	268
7.4	Truncating the Normal Distribution	276
7.5	Methodology of the Software Used for this Case Study	277
7.6	How Many Iterations?	279
7.7	The Results of the Simulation	282
7.7.1	The Input Distributions	285
7.7.2	The Output Distribution	287
7.8	Advantages of this Improved Technique	293

Chapter 8 Conclusions

8.1	Introduction	296
8.2	Conclusions from the Literature Survey	297
8.3	Conclusions based from Risk Management Questionnaire	297
8.4	Conclusion based from the Case Study	300

Chapter 9 Recommendations for Future Work

9.1	Introduction	303
9.2	Future Research	303

Appendices

Appendix A	Risk Management Questionnaire	A-1
Appendix B	Introductory letter to the Construction and Oil companies	B-1
Appendix C	The means, standard deviations and sample sizes of all the divisions for questions 4 to 49 of the Questionnaire	C-1
Appendix D	Full analysis of the characteristics for each of the types of risks in questions 50-57	D-1

Appendix E	Mean values and sample size tables for the two industries in questions 50-57	E-1
Appendix F	Overall mean values and samples size table for questions 50-57	F-1
Appendix G	ALARP methodology	G-1
Appendix H	Calculation for overall uncertainty for leak frequencies	H-1
Appendix I	Propagation of uncertainty	I-1
Appendix J	Ignition probabilities	J-1
Appendix K	Double log-graph to find best estimate ignition probability	K-1
Appendix L	Probability of spurious values when using normal distributions	L-1
Appendix M	The mean and skewness values of the 10 runs for the six iteration amounts	M-1
Appendix N	Graphical representations of the input normal distributions	N-1
Appendix O	Linked data to Figure 7.1 1	O-1
Appendix P	Published Material	P-1
