

Supplementary Figure 3

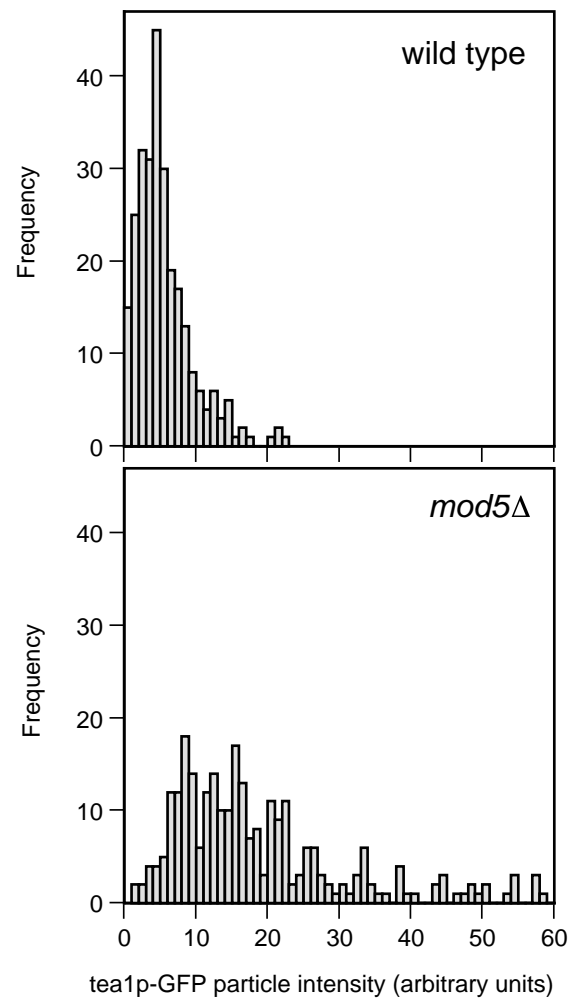

Integrated tea1p-GFP intensity at cell tips in wild-type and *mod5Δ* mutants during exponential growth

Note: 200 cells assayed for each strain; see Methods for further information

Supplementary Figure 4.

Intensity of tea1p-GFP particles in wild-type and *mod5Δ* mutants during exponential growth

Notes:
1. 275 particles assayed for each strain; see Methods for further information.
2. Unit values between Suppl. Figs. 3 and 4 are derived from different imaging conditions and are not comparable
