

Supplementary Figure 6

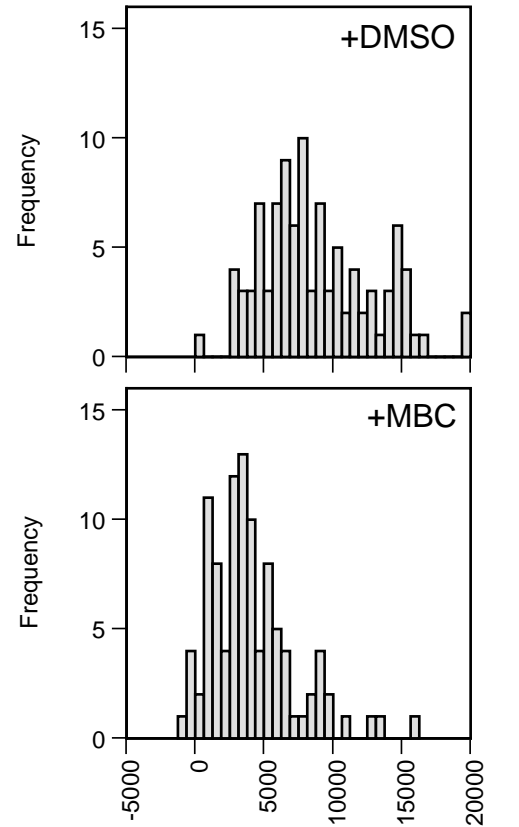

Ratio of tip:side cortical GFP-mod5p intensity in exponentially growing wild-type cells after microtubule disruption with 50 $\mu\text{g/ml}$ MBC

Note: 60 cell tips assayed for each condition. A high tip:side ratio indicates highly polarised GFP-mod5p. A tip:side ratio of 1 indicates an isotropic distribution

Supplementary Figure 7

Integrated tea1p immunofluorescence intensity at cell tips in exponentially growing wild-type cells after 30 min 50 $\mu\text{g/ml}$ MBC treatment

tea1p signal at cell tips (arbitrary units)

Note: 100 cell tips assayed for each condition
