

Supplementary Figure 8

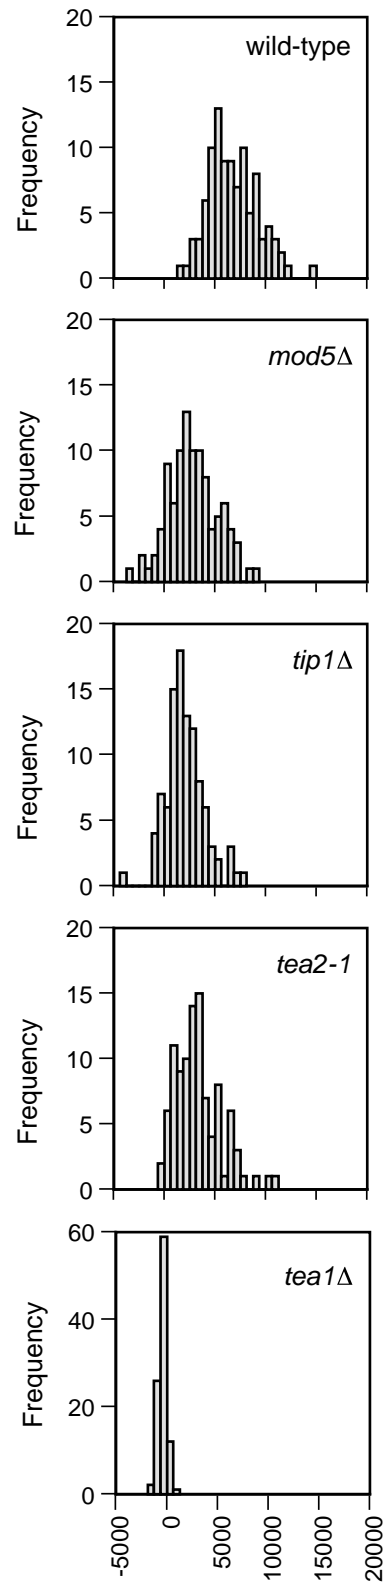

Ratio of tip:side cortical GFP-mod5p intensity in wild-type and mutant strains during exponential growth

Tip:side intensity ratio

Note: 60 cell tips assayed for each strain; see Methods for further information

Integrated tea1p immunofluorescence intensity at cell tips in wild-type and mutant strains during exponential growth

tea1p signal at cell tips (arbitrary units)

Note: 100 cell tips assayed for each strain; see Methods for further information. Scale is tripled for control tea1Δ cells.
