PREFACE

The summary tables and figures in Volume 1 were drawn from the tables contained in Volume 2. In this volume, the tables have been numbered to correspond with the numbers of the appropriate sections of text in Volume 1. The number of each table consists of the volume number preceeding the colon and the chapter number immediately following the colon. Further numbers refer to parts of the chapter. The construction of the tables for Chapters 5 and 6 and the lifetables is described in Volume 1, Appendix 1, and the abbreviations in Appendix 4. In the list of contents, some of the titles of the tables have been shortened.

Section A contains tables associated with Chapters 3 and 4 of Volume 1. Section B contains tables associated with Chapters 5 and 6 of Volume 1. Section C contains the lifetables from which the tables in Section B were derived.

The tables associated with each of Chapters 5 and 6 in Section B have been subdivided into two groups. Overall comparisons of the lives of groups of restorations have been grouped in Part 1. Paired comparisons have been grouped in Part 2. Tables in Part 2 have the suffix 'A' added to the table number.

SECTION A

CHAPTER 3

Table 2:3.4.

The Distribution of Treatment in males and females.

	Males		Females		Both	
	Count	%	Count	%	Count	%

SECTION C

LIFETABLES

PREFACE

Each lifetable has three parts. The first two columns headed T and N refer to the time at risk and the number of restorations at risk. The next four columns, headed All Fates, refer to the actual survival of restorations described in Chapter 5. The last four columns, headed Replacements Alone, refer to the latent durability of the restorations described in Chapter 6.

p = lifetable estimate of proportion surviving.

S.E. = standard error of the estimate.

L = number of lost restorations (includes replacements, conversions and extractions).

R = number of replaced restorations.

C = number of restorations with censored survival times.

Lifetable 2:1.

The Survival of Amalgam Restorations.
